(57) Abstract: The invention provides a method for managing the data in the removable memory. The method includes: applying or organizing or establishing or re-building the file managing system of the storage medium of said removable memory according to the uses of said memory chips; and utilizing said file managing system to perform the corresponding processing in said memory chips according to the operation instructions of the host system, which is connected with said file managing system. By applying the method for managing the data in the removable memory, which the invention provides, the capacitance of the removable memory can be extended, and the storage medium can be updated, thus the data security, the functions and the convenience of the system are increased.
